Highly versatile Software Engineer and Technical Virtual Assistant with 5+ years of experience across full-stack development, software quality assurance, and high-precision manufacturing. Expert in building efficient digital ecosystems using PHP (Laravel), ASP.NET, and AI-driven automation to replace manual processes with streamlined, scalable solutions. A data-driven problem solver with a unique ability to bridge administrative excellence with technical innovation, ensuring operational precision and high-level project success.

Professional Experience

Junior Programmer (Full-stack Laravel Developer)

HTECT CORP.

Nov 2022 – Oct 2023

- Design, developed, and tested Laravel-based web applications ensuring high performance and cross-platform responsiveness.
- Integrated automated testing frameworks that reduced bug reports, contributing to more stable and reliable software releases.
- Optimized existing codebase and successfully delivered multiple major projects ahead of schedule, improving client satisfaction.
- Participated in Agile sprint planning and daily stand-ups, improving team communication and project delivery efficiency.
- Conducted code reviews and provided constructive feedback to improve overall code quality and maintainability.
- Debugging
- Started learning how to use API Postman : (Content-Type: application/json, POST, PUT, DELETE, etc...)
- Started learning advance database schema logic (1:N, 1:1, N:M)
- Importance of Primary key and foreign key in database.
- Project scheduling using asana.
- Project progress using Gitlab.

Personal Information

BS Computer Science

De La Salle University – Dasmarinas

(2013 – 2018)

May 12, 1997

Core Tech Stack

Back-End & Frameworks

PHP (Laravel), C# (.NET), Laravel, EXAMPP

Front-End & Design

JavaScript, Sass/Flexbox/Grid

Databases

MySQL, MariaDB, Supabase, Firebase, MongoDB, atlat

AI & Automation

LLM Prompt Engineering (GPT-4, Claude, Gemini), AI Video Automation (Suno, ElevenLabs, CapCut), AI-assisted code generation.

Tools & Terminals

Git, VS Code, Visual Studio, MS Excel (Advanced Data Analysis/Scheduling). MS Powerpoint & MS Word (Presentaion)

Deployment

Netlify, Render, InfinityFree.

API

Postman

Professional Experience

System Developer (Full-stack .NET Developer)

GRUPPO EMS CORP.

Jun 2022 – Oct 2022

- Built a C# .NET MVC web application supporting internal HR operations, including employee performance evaluation and attendance management modules.
- Implemented QR code-based automated timekeeping system, improving attendance accuracy and reducing manual processing time.
- Designed and developed vehicle and shuttle tracking systems, enhancing fleet monitoring and resource management.
- Integrated developed applications with the company's central database, ensuring data consistency across departments.
- Collaborated with Admin Dept. to gather requirements, analyze business needs, and deliver user-focused solutions.
- Learn to use : bootstrap, project deployment (Thru Iam).

Software Quality Assurance (QA)

Conduent

Mar 2018 – Aug 2018

- Executed comprehensive QA testing across multiple websites, ensuring functionality, usability, and performance across diverse environments.
- Developed standardized testing procedures in Microsoft Excel, streamlining website validation and maintaining quality control benchmarks.
- Evaluated UI/UX designs for usability and accessibility, testing responsiveness across multiple devices and screen sizes.
- Documented test results and strategic recommendations in professional QA reports, supporting continuous development improvements.
- Test the developed web app. On android and iOS
- MS Word for reporting.

Test Engineering Dept. Tech III

Western Digital

Oct 2019 – Apr 2022

- Managed technical operations of Slider Fab machinery, ensuring peak performance through systematic inspections and 5S methodology.
- Leveraged Microsoft Excel macros to process complex machine performance data, identifying root causes of recurring failures.
- Resolved a critical machine issue within 2 weeks — well under standard resolution timelines — enabling the facility to meet weekly production targets. Implemented technical solutions including rewiring and noise mitigation, significantly reducing downtime and improving production stability
- Use MS Excel Macro to check slider (Noise, amps...)
- MS Excel for data failure analysis, data-gathering, data mapping.
- MS Word for reporting.

Freelance Experience

Website & Inventory

Streetwise PH

Mar 2026 – Present

- Replaced manual handwritten records with a digital inventory system tracking stock levels and sales for a retail business.
- Integrated sales analysis features, providing better visibility into performance trends and customer behavior. Automatic invoice creator for buyers. Sales report in excel file

Website for Achitech and Civil

Archivil-plan

Mar 2026 – Present

- Built a construction estimation web tool that converts uploaded floor plan images into measurable data using scatter-based mapping.
- Automated Bill of Quantities (BOQ) calculations for materials like cement, enabling organized Excel-based reporting.
- Designed a separated frontend/backend architecture for scalable, high-performance construction estimation workflows.

Mailer sender (Automation)

Victorias Haven private resort

Feb 2026 – Mar 2026

- Workflow Automation: Engineered a centralized application to automate repetitive daily email communications, reducing task completion time from 10 minutes to 10 seconds.
- API Integration: Developed a seamless mail-sending interface that eliminates the need for manual browser-tab switching and direct Gmail logins. Dynamic Asset Attachment: Programmed logic for automatic image and file attachment based on specific user selections, ensuring data accuracy and consistency.
- Operational Efficiency: Reclaimed significant team bandwidth by replacing manual data entry with a streamlined "input-and-send" digital workflow.

Booking System

Victorias Haven private resort

Mar 2026

- Digitized Reservation Management: Replaced inefficient paper-based booking logs with a centralized, calendar-driven digital system, eliminating manual errors such as double bookings and missed reservations.
- Enhanced Operational Efficiency: Developed an instant-access search and update interface, significantly reducing the time staff spent retrieving guest information and managing availability.
- Revenue Protection: Minimized lost revenue opportunities by implementing real-time availability tracking and automated booking conflict alerts.
- Data-Driven Insights: Integrated an analytics module to track and evaluate booking patterns, enabling leadership to make informed, strategic decisions on dynamic pricing and seasonal availability.
- System Modernization: Successfully transitioned resort operations from "chaos" to a clean, scalable digital environment, improving both the employee workflow and the guest experience.

Invoice PDF

PDF Automator

Feb 2026 – Mar 2026

- Engineered a high-performance client-side app (HTML/CSS/JS) supporting simultaneous import of up to 2,000 PDF files.
- Developed 3 extraction categories (Multiple Keywords, Single Keyword, Extract All) with Excel export functionality.
- Prioritized local browser processing to ensure complete data privacy with zero server-side data exposure.
