

CURRICULUM VITAE

CERON MATTHEW CALSENA

- Executive Virtual Assistant
- General Virtual Assistant
- PHP Developer
- Automation & AI Workflow Developer
- Data Analysis

"YOU LEAD. I HANDLE THE REST"

OBJECTIVE

To leverage expertise in virtual assistance, PHP development, automation, AI workflows, and data analysis to streamline operations, enhance productivity, and deliver actionable insights. Focused on supporting executives and teams with efficient solutions, innovative technologies, and precise data-driven strategies to drive organizational growth and optimize performance.

MISSION

To empower businesses and professionals by providing efficient virtual assistance, innovative automation solutions, and precise data-driven insights. Dedicated to enhancing productivity, simplifying workflows, and enabling teams to achieve their objectives through technology, creativity, and strategic support.

GOALS

The primary goals focus on delivering reliable and efficient virtual assistance to support executives and teams, while developing and maintaining PHP applications that enhance productivity. Implementing AI and automation solutions streamlines workflows and reduces manual effort. Additionally, analyzing data provides actionable insights for informed decision-making, and continuously adopting emerging technologies ensures improved performance and sustained business growth.

On-Contract

PROFESSIONAL EXPERIENCE

Junior Programmer (Laravel Dev.)

Nov 2022 – Oct 2023

HTECT CORP.

Full Time

At Htech, a dynamic software development firm specializing in custom solutions, Handle contributed as a Junior Programmer focusing on Laravel framework applications. Collaborating with senior developers, the role involved designing, developing, and testing web applications to ensure high performance and responsiveness across platforms. Utilizing Agile methodologies, participation in sprint planning and daily stand-ups enhanced team communication and project management. Key contributions included optimizing existing code and successfully deploying several major projects ahead of schedule, positively affecting client satisfaction. The initiative to integrate automated testing frameworks helped reduce bug reports, contributing to more stable releases. Additional responsibilities encompassed participating in code reviews and providing constructive feedback to improve overall code quality and maintainability. The experience emphasized collaboration, continuous learning, and delivering reliable software solutions in a fast-paced environment.

System Developer (.Net Dev.)

Jun 2022 – Oct 2022

GRUPPO EMS CORP.

Full Time

Completed structured training in ASP.NET web development, successfully adapting to the organization's technology stack and earning multiple Udemy certifications to strengthen technical expertise. Developed a C# .NET MVC web application to support internal operations, incorporating modules for employee performance evaluation and attendance management. Implemented automated timekeeping through ID based QR code scanning to improve accuracy and operational efficiency. Designed and developed tracking systems for shuttle services and private vehicle usage to enhance monitoring and resource management. Collaborated closely with stakeholders to gather system requirements, analyze business needs, and deliver reliable, user focused solutions aligned with company objectives. Partnered with the Human Resources department to integrate developed applications with the company's central database, ensuring data consistency, system reliability, and improved employee management processes across departments while maintaining performance standards.

End-Contract

On-Contract

PROFESSIONAL EXPERIENCE

 Test Engineering Dept. Tech III

 Oct 2019 – Apr 2022

 Western Digital

Full Time

Handled the hands-on operation and technical maintenance of Slider Fab machinery, ensuring peak performance through systematic inspections and periodic cleaning. Expertly implemented 5S methodologies to sustain an organized, safe, and high-efficiency workspace while documenting daily operational health via detailed status reports. By leveraging Microsoft Excel with sophisticated macros to process complex machine performance data, conducted deep-dive analyses to identify underlying mechanical trends and root causes of recurring failures. This data-driven approach facilitated the discovery and implementation of effective technical solutions, including rewiring, grounding corrections, and noise mitigation, which restored machine stability and significantly reduced downtime. Successfully resolved a major machine issue within a two-week period drastically outperforming standard resolution timelines which directly enabled the facility to meet weekly target yields and bolstered overall production longevity through proactive corrective maintenance and systematic troubleshooting.

 Software Quality Assurance (QA)

 Mar 2018 – Aug 2018

 Conduent

Full Time

Handled comprehensive software quality assurance (QA) testing for developed websites to ensure peak functionality, usability, and technical performance across diverse digital environments. Developed and implemented step-by-step testing procedures using Microsoft Excel to effectively standardize website validation processes and maintain high quality-control benchmarks. Prepared detailed, professional QA reports within Microsoft Word, meticulously documenting test results, critical findings, and strategic recommendations for the development team. Evaluated UI/UX designs to ensure superior usability, accessibility, and user experience consistency, while rigorously testing website responsiveness across multiple devices and varying screen sizes. Analyzed complex user interaction flows to assess precisely how users respond to the system and how the website responds to specific user actions. Verified all expected outcomes and documented results to support continuous development improvements, ensuring that every digital product met rigorous stability requirements and optimized the final end-user engagement.

End-Contract

On-Contract

PROFESSIONAL EXPERIENCE

 Store Manager

 Poultry Farm

 Aug 2023 – Present

Freelance

Handled the comprehensive sales and distribution of chicks and eggs, alongside systematic culling and poultry health management. Utilized organic strategies by integrating natural remedies as vitamin alternatives to maintain a sustainable, high-health environment for the flock. Managed all facility maintenance, rigorous costing analysis, and operational logistics to ensure a streamlined production cycle. Leveraged digital platforms, specifically YouTube and Facebook, to execute modern marketing strategies and introduce the business to a broader audience. Through these data-driven and organic practices, ensured long-term poultry vitality, optimized production costs, and strengthened brand visibility. This approach involved balancing traditional livestock husbandry with modern digital outreach, successfully expanding the customer base while maintaining a high standard of animal welfare and financial oversight within the poultry enterprise.

 Assistant Resort Manager

 Private Resort.

 July 2025 – Present

Freelance

Handled the comprehensive digital presence and guest relations for a private family-owned resort, serving as the primary point of contact for all inquiries via Meta Messenger. Managed end-to-end guest communications, from initial booking consultations to post-stay feedback, ensuring a professional and responsive brand voice. Beyond digital engagement, directed all physical resort maintenance and specialized pool management protocols to guarantee a safe, premium environment for guests. Contributed to strategic promotional decision-making by collaborating with ownership to develop seasonal marketing campaigns and pricing adjustments that optimized occupancy rates. Executed routine facility inspections and coordinated technical repairs to maintain high operational standards across the property. By bridging the gap between digital customer service and physical facility upkeep, ensured a seamless guest experience that aligned with long-term business goals and maintained the resort's reputation for excellence and reliability.

On-Contract

PROFESSIONAL EXPERIENCE

Client-Side Web Application.

Mar 15, 2020 - Present

archivil-plan

Freelance

The application is a web-based estimation tool designed to assist in construction planning by transforming uploaded floor plan images into measurable data. Users can upload a floor plan image, and the system processes it to determine dimensions and spatial layout. It converts visual inputs into scatter-based mapping, enabling clearer interpretation of structure and area. The platform focuses on Bill of Materials (BOM) tasks, particularly for materials like cement, by calculating required quantities based on extracted measurements. It simplifies estimation by combining image-based analysis with structured computation, allowing users to generate organized outputs. The system also supports exporting results into Excel format for reporting and documentation. Its separated frontend and backend architecture enhances performance, ensuring smooth processing, scalability, and efficient handling of construction estimation workflows.

Client-Side Web Application.

Mar 17, 2026 - Present

Streetwise PH

Freelance

Streetwise PH is a small-time retail business focused on selling clothing and vape products, serving a growing customer base through both casual and repeat buyers. To improve daily operations, the business required a transition from manual, handwritten records to a more structured digital system. An automated solution was introduced to manage inventory, monitor stock levels, and ensure accurate tracking of products. Sales analysis features were also integrated to provide better visibility into performance and customer trends. All transactions are now recorded digitally, reducing errors and improving efficiency. This system supports smoother operations, enhances organization, and allows the business to make informed decisions while maintaining reliable and consistent record-keeping across all activities.

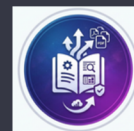

PROFESSIONAL EXPERIENCE

End-Contract

On-Contract

 Client-Side Web Application.

 Feb 2026 – Mar 21 2026

 PDF Automator

Freelance

Handled the end-to-end development and architectural design of the Web-app, a high-performance client-side application built with HTML, CSS, and JavaScript. Engineered the system to support the simultaneous import of up to 2000 PDF files, ensuring robust memory management and browser stability during high-volume processing. Developed three distinct extraction categories Multiple Keywords, Single Keyword, and Extract All to provide users with versatile data mining options tailored to specific search requirements. Implemented a sophisticated mapping algorithm that scans the internal structure of uploaded documents to pinpoint and isolate exact keyword matches. Facilitated seamless data portability by integrating an export feature that allows users to download all extracted text and mapped results directly into Microsoft Excel format. By prioritizing local browser processing, ensured total data privacy and security while delivering an efficient, cosmic-themed interface that streamlines complex document traversal and large-scale information retrieval tasks.

 Client-Side Web Application.

 March 3 – 6, 2026

 Booking Record.

Freelance

Handled the development of a web application designed to support the bookkeeping and reservation management of a private resort. The project focused on creating a calendar-based system that allows staff to easily organize and record booking information for guests. Through the calendar interface, users can select a specific date and enter relevant details about the reservation, helping the resort maintain a clear and organized schedule of bookings.

The web application was designed to simplify the resort's record-keeping process by replacing traditional paper-based logs with a more structured digital system. Staff members can quickly access reservation details, update information when needed, and review upcoming or past bookings directly within the platform. This approach helps ensure that booking records remain organized and accessible without the need to search through physical documents.

In addition to managing reservations, the system includes integrated data analysis features that allow the resort to review booking information and better understand reservation patterns. The main goal of the project was to provide the resort with a convenient digital solution that reduces reliance on paper while improving the overall efficiency of bookkeeping and reservation tracking.

End-Contract

On-Contract

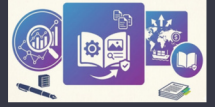

PROFESSIONAL EXPERIENCE

Client-Side Web Application.

Feb 28 2026 – Mar 3 2026

Auto Mailer

Freelance

Handled a project focused on automating the process of sending emails through a simple web application designed to reduce unnecessary steps and improve user convenience. The goal of the project was to eliminate the need for users to repeatedly open multiple tabs and navigate through several actions such as opening Gmail, logging in, composing a message, attaching images, and manually typing the same information each time an email needed to be sent.

The web application was designed so that when users open the platform, they can quickly enter minimal information into a simple form interface. The system is already integrated with the user's email, allowing them to send messages without needing to access their email provider separately. The application also includes a feature that allows pictures to be automatically attached based on the user's selection, making the process faster and more organized.

The project focused on creating a smooth and efficient workflow where users can complete email tasks with only a few clicks. By simplifying the interface and automating repetitive actions, the system helps users avoid the hassle of switching between multiple tabs and performing the same manual steps every time they need to send an email.

Desktop App C#(Winform)

Dec 2020 – July 2021

Slider Data Mapping

Freelance

A Data Slider Mapping application was developed using C#. The tool is designed to import Excel files and transform the dataset into a visual scatter point representation, making it easier to explore and interpret information. Through this approach, complex data can be flattened and displayed in a clear visual layout, helping users quickly understand relationships within the dataset. The application includes functionality for loading spreadsheet data, processing it, and presenting it in an interactive scatter-based format. In addition to visualization, the system also provides the ability to generate and export structured Excel reports based on the processed data. This feature supports documentation and sharing of results after analysis. Overall, the application focuses on simplifying data handling, improving visibility of information, and providing a convenient workflow for importing, visualizing, and exporting spreadsheet-based datasets.

EDUCATION

SKILLS

CERTIFICATIONS

2013 – 2018

Bachelor's Degree in Computer Science

De La Salle University Dasmariñas (DLSU-D)

Bachelor of Science in Computer Science, De La Salle University Dasmariñas (DLSU-D) – Graduated with honors, honing skills in software development, algorithms, and database management. Completed comprehensive projects that enhanced problem-solving abilities and teamwork experience. Developed a strong foundation in programming languages such as Java, C# Winform, Android, iOS, HTML, CSS, JS. Engaged in industry-relevant internships, applying theoretical knowledge in real-world scenarios, and fostering a deep understanding of emerging technologies. This rigorous academic training prepares me to excel in dynamic tech environments and contributes to my career goal of becoming a software engineer.

Collaboration and teamwork | Problem-solving | Presentation skills | Multitasking | Data visualization

Adaptability | Time management | Microsoft Excel (data entry & basic formulas & reports)

Microsoft Word (professional documentation) | Microsoft PowerPoint (presentations & reporting)

Pool-management | Critical thinking | Accountability and reliability | Attention to detail | Resource and cost management

C# BASICS FOR BEGGINERS: LEARN C# FUNDAMENTALS BY CODING (MOSH HAMEDANI)

UDEMY

June 15, 2022

Handled foundational C# programming within the \"Basics for Beginners\" Udemey course, focusing on essential object-oriented concepts, data types, and control structures. Gained practical experience implementing exception handling and debugging techniques for real-world applications. Developed the technical proficiency to create efficient software solutions and collaborate effectively within development teams. This training established a robust programming baseline, enhancing the ability to adapt to evolving project requirements and strengthening overall software development capabilities.

CERTIFICATIONS

C# INTERMEDIATE: CLASSES, INTERFACES, AND OOP (MOSH HAMEDANI)

UDEMY

June 16, 2022

Handled advanced object-oriented programming within C# Intermediate training on Udemy, focusing on designing robust applications through classes and interfaces. Gained proficiency in encapsulation, inheritance, and polymorphism to build scalable software. Implemented sophisticated design patterns and leveraged C# libraries to enhance system functionality. This training facilitated the ability to architect complex systems, significantly improving software development capabilities and ensuring the implementation of efficient, industry-standard coding practices within a high-performance, object-oriented development environment.

GITHUB ULTIMATE: MASTER GIT & GITHUB - BEGGINER TO EXPERT (JAYSON TAYLOR)

UDEMY

June 17, 2022

Handled comprehensive version control within the \"GitHub Ultimate\" Udemy course, mastering Git commands, branching strategies, and collaborative workflows. Gained proficiency in repository management, issue tracking, and pull request handling to ensure seamless team collaboration. This training significantly improved software development workflows and project management efficiency. Developed the technical expertise to maintain clean code history and navigate complex industry-standard environments, facilitating more proficient and organized development practices across diverse professional settings.

THE MODERN FLEXBOX, GRID, SASS & ANIMATIONS, DEVELOPER COURSE (MUSLIM HELALEE)

UDEMY

Feb 10, 2026

Handled advanced responsive web design within the \"Modern Flexbox, Grid, Sass & Animations\" Udemy course, mastering fluid layouts and user-friendly interfaces. Gained proficiency in Sass for efficient stylesheet management and implemented dynamic CSS animations to significantly improve user engagement. These competencies facilitated the creation of modern, attractive websites that meet rigorous industry standards. Developed technical expertise in sophisticated CSS architectures, directly enhancing overall web development capabilities and the ability to deliver high-performance front-end solutions.

CERTIFICATIONS

VIRTUAL ASSISTANT TRAINING (VA 101)

YourVABuddy

Feb 25, 2026

Handled comprehensive remote administrative support training through the VA 101 program at YourVABuddy, mastering essential skills in time management, organization, and effective communication. Gained proficiency in utilizing project management tools such as Asana, Trello, and Google Workspace to streamline complex workflows and boost productivity. Developed competencies in client relationship management and social media coordination to support diverse business needs. This training facilitated the ability to manage multifaceted tasks efficiently while elevating client productivity within fast-paced, remote professional environments.

BUILD ANY APP, GAME OR WEBSITE WITH AI (IVAN LOURENÇO GOMES)

UDEMY

March 9, 2026

Ivan Lourenço Gomes's Vibe Coding Bootcamp teaches beginners and creators how to build real apps, games, and websites using modern AI tools. Students learn to develop projects with platforms like Replit, Claude, and Lovable while managing code through GitHub. The bootcamp also covers backend and databases using Supabase and Firebase. Participants connect their projects to GitHub and launch their web apps online for free. By the end, students understand AI-assisted development and can turn ideas into working digital products quickly and efficiently.
