Objective

To leverage over five years of multi-disciplinary experience as a Software Engineer and Executive Virtual Assistant to provide high-impact support for global organizations. I aim to utilize my proficiency in PHP, Laravel, and .NET alongside advanced AI workflow automation to eliminate operational bottlenecks and drive efficiency. My focus is on delivering technical excellence and administrative precision, ensuring that complex projects are executed with the highest standards of accuracy and data-driven strategy.

Mission

My mission is to empower business leaders by bridging the gap between innovative technology and superior administrative execution. I am dedicated to transforming manual, time-consuming workflows into streamlined digital systems through AI integration, custom web development, and rigorous data analysis. By providing reliable assistance and technical mastery, I enable executives to focus on scaling their core operations while I manage the technical architecture and logistical details that move their enterprise forward with total reliability.

Goal

My primary goal is to optimize organizational performance by implementing sophisticated automation solutions and maintaining robust web applications that enhance team productivity. I strive to deliver actionable business insights through deep-dive data analysis and meticulous project management across platforms like Amazon, Lovable, and GitHub. By continuously adopting emerging LLM technologies and precision-testing methodologies, I aim to ensure sustained business growth, zero-defect deployments, and a seamless guest or client experience across all digital and physical touchpoints.

Professional work experience

Mini E-commerce website

Streetwise PH

Mar 2026 – Present

Freelance

Running a retail business on manual paper logs is a recipe for operational errors and missed revenue opportunities. To solve this, I engineered a comprehensive digital operations system for StreetWise PH—a retail store specializing in clothing and vape products—that replaces outdated handwritten records with a streamlined technical architecture. This automated solution manages complex inventory tracking and

- monitors stock levels in real time to ensure optimal product availability. The system digitally records every transaction, providing the owner with deep visibility into sales performance and customer trends through integrated analysis features. By converting manual chaos into structured digital data, the platform minimizes human error, improves daily efficiency, and empowers the business to make smarter, data-driven decisions for long-term growth.

Construction automation system

Archivil-Plan

Mar 15, 2026 – Present

Freelance (on hold)

The application is a web-based estimation tool designed to assist in construction planning by transforming uploaded floor plan images into measurable data. Users can upload a floor plan image, and the system processes it to determine dimensions and spatial layout. It converts visual inputs into scatter-based mapping, enabling clearer interpretation of structure and area. The platform focuses on Bill of Quantities (BOQ) tasks, particularly for materials like cement, by calculating required quantities based on extracted measurements. It simplifies estimation by combining image-based analysis with structured computation, allowing users to generate organized outputs. The system also supports exporting results into Excel format for reporting and documentation. Its separated frontend and backend architecture enhances performance, ensuring smooth processing, scalability, and efficient handling of construction estimation workflows.

Booking automation system

Booking record System

March 3 – 6, 2026

Professional work experience

Website automation system (PDF)

PDF Automator

Feb 2026 – Mar 21 2026

Freelance

Handled the end-to-end development and architectural design of the Web-app, a high-performance client-side application built with HTML, CSS, and JavaScript. Engineered the system to support the simultaneous import of up to 2000 PDF files, ensuring robust memory management and browser stability during high-volume processing. Developed three distinct extraction categories Multiple Keywords, Single Keyword, and Extract All to provide users with versatile data mining options tailored to specific search requirements. Implemented a sophisticated mapping algorithm that scans the internal structure of uploaded documents to pinpoint and isolate exact keyword matches. Facilitated seamless data portability by integrating an export feature that allows users to download all extracted text and mapped results directly into Microsoft Excel format. By prioritizing local browser processing, ensured total data privacy and security while delivering an efficient, cosmic-themed interface that streamlines complex document traversal and large-scale information retrieval tasks.

Website automation system (mail)

Auto mailer

Feb 28 2026 – Mar 3 2026

Freelance

Handled a project focused on automating the process of sending emails through a simple web application designed to reduce unnecessary steps and improve user convenience. The goal of the project was to eliminate the need for users to repeatedly open multiple tabs and navigate through several actions such as opening Gmail, logging in, composing a message, attaching images, and manually typing the same information each time an email needed to be sent.

The web application was designed so that when users open the platform, they can quickly enter minimal information into a simple form interface. The system is already integrated with the user's email, allowing them to send messages without needing to access their email provider separately. The application also includes a feature that allows pictures to be automatically attached based on the user's selection, making the process faster and more organized.

The project focused on creating a smooth and efficient workflow where users can complete email tasks with only a few clicks. By simplifying the interface and automating repetitive actions, the system helps users avoid the hassle of switching between multiple tabs and performing the same manual steps every time they need to send an email.

Desktop automation system

Slider Data Mapping

Dec 2020 – July 2021

Special-project

A Data Slider Mapping application was developed using C#. The tool is designed to import Excel files and transform the dataset into a visual scatter point representation, making it easier to explore and interpret information. Through this approach, complex data can be flattened and displayed in a clear visual layout, helping users quickly understand relationships within the dataset. The application includes functionality for loading spreadsheet data, processing it, and presenting it in an interactive scatter-based format. In addition to visualization, the system also provides the ability to generate and export structured Excel reports based on the processed data. This feature supports documentation and sharing of results after analysis. Overall, the application focuses on simplifying data handling, improving visibility of information, and providing a convenient workflow for importing, visualizing, and exporting spreadsheet-based datasets.

Professional work experience

Junior Programmer (Laravel-project)

HTECT CORP.

Nov 2022 – Oct 2023

Full-time

Developed and maintained Laravel framework web applications at a dynamic software development firm specializing in custom solutions. Collaborated with senior developers in Agile sprints — designing, testing, and deploying responsive, high-performance applications. Integrated automated testing frameworks that reduced bug reports and contributed to more stable releases. Participated in code reviews and delivered constructive feedback to improve overall code quality and maintainability.

Laravel PHP MySQL Agile Git Testing

System Developer (.NET Dev.)

GRUPPO EMS CORP.

Jun 2022 – Oct 2022

Full-time

Completed structured ASP.NET training and developed a C# .NET MVC web application supporting internal HR operations — including employee performance evaluation, attendance management, and ID-based QR code timekeeping. Designed and developed tracking systems for shuttle services and private vehicle usage. Partnered with the HR department to integrate applications with the company's central database, ensuring data consistency and system reliability across all departments.

C# .NET ASP.NET MVC SQL Server QR Code HR Systems

Test Engineering Tech III (Test Engineering Dept.)

Western Digital

Oct 2019 – Apr 2022

Full-time

Managed hands-on operation and technical maintenance of Slider Fab machinery at one of the world's leading data storage companies — ensuring peak performance through systematic inspections and 5S methodology. Leveraged Excel macros to process complex machine performance data and conduct deep-divide analyses identifying root causes of recurring failures. Resolved a critical machine issue within two weeks, drastically outperforming standard resolution timelines and enabling the facility to consistently meet weekly production targets.

Data Analysis Excel Macros 5S Methodology Troubleshooting Technical Maintenance

Software Quality Assurance

Conduent

Mar 2018 – Aug 2018

Full-time

Handled comprehensive QA testing for client websites — ensuring peak functionality, usability, and technical performance across diverse digital environments. Developed step-by-step testing procedures in Microsoft Excel to standardize website validation and maintain high quality-control benchmarks. Evaluated UI/UX designs for usability and accessibility, rigorously tested responsiveness across multiple devices and screen sizes, and documented findings in detailed professional QA reports for the development team.

QA Testing UI/UX Review Test Documentation Cross-Device Testing Excel

Education

De La Salle University Dasmariñas (DLSU-D)

Bachelor's Science in Computer Science

2013 – 2018

Bachelor of Science in Computer Science, De La Salle University Dasmariñas (DLSU-D) – Graduated with honors, honing skills in software development, algorithms, and database management. Completed comprehensive projects that enhanced problem-solving abilities and teamwork experience. Developed a strong foundation in programming languages such as Java, C#, Winform, Android, iOS, HTML, CSS, JS. Engaged in industry-relevant internships, applying theoretical knowledge in real-world scenarios, and fostering a deep understanding of emerging technologies. This rigorous academic training prepares me to excel in dynamic tech environments and contributes to my career goal of becoming a software engineer.

Skills & Training

- Time Management & Prioritization
- Data entry
- Google calendar management
- Communication
- Microsoft Office Excel – Data analysis | Data gathering | Data visualization | Solving | data entry
- Microsoft PowerPoint (presentations & reporting)
- Microsoft Word (professional documentation)
- workflow
- Graphic designer
- Adaptability
- AI workflow
- Problem Solving
- Attention to details
- Accountability and reliability
- Email management
- Google spreadsheet
- Desktop application developer (full-stack)
- PHP-Laravel website developer (full-stack)
- Front-end support
- Back-end support
- Research skills
- Document presentation
